Dirty Air Diffuser

Comfort First Filtered Diffuser™

*You Drink Filtered Water,
Shouldn't You Breathe Filtered Air?™*

The Comfort First Filtered Diffuser™ Ends Drafts.

For decades employees have been complaining about cold air blowing on them from overhead air diffusers. Too often these diffusers simply "dump" air straight down, which is the cause of draft complaints. Competitor remedies only address draft issues and often don't work to expectations, plus they're expensive, costing 2 to 5 times as much as the *Comfort First Filtered Diffuser™*. Only the *Comfort First Filtered Diffuser™* eliminates drafts, while improving indoor air quality and creating a healthier work environment.

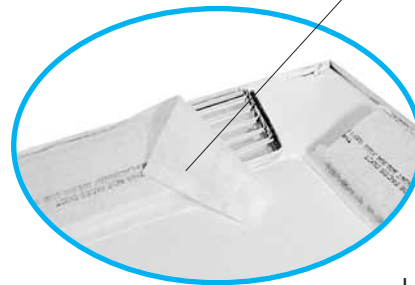

Unique Features. Outstanding Benefits.

Each *Comfort First Filtered Diffuser™* features four-sets of independently adjustable louvers, providing complete individual air control. No more "dumping" of air, regardless of the Air Volume (CFM). Guaranteed to deliver the best air distribution possible, while providing an ambient air temperature comfortable for **EVERYONE**.

- **4-Way Adjustable Flow Patterns** – Adjust one side to direct air slightly downward, another side can bounce off the ceiling while the two other sides can blow straight out, unlimited variations.
- **Eliminates Air Draft Complaints** – With superior air distribution, complaints of being too cold or too hot are eliminated!
- **Saves Energy** – Allows for a higher thermostat setting. A NASA study states a thermostat change of one degree is equivalent to 10% energy usage.
- **Saves Money** – By eliminating costly space heaters and fewer sick days.
- **Reduces Tenant Complaints** – Fewer workers compensation claims and employee lawsuits leads to higher occupancy by retaining tenants, this also improves company profit.

Easily-replaced electrostatic filter, no power required.

The Comfort First Filtered Diffuser™ Cleans Air.

Ready or not, fears about Indoor Air Quality will continue to grow as a top employee concern.

As people become more educated about sick building syndrome, they will be demanding management does something to improve the quality of the air they breathe. The EPA states indoor air quality is on average seven to ten times more polluted than outdoor air, even in metropolitan areas. Harmful airborne particles are linked to health problems such as asthma, fatigue, allergies, respiratory ailments, headaches, nausea and more.

Until now, solutions were few. Cleaning or replacing ductwork is too costly. Plus, cleaning the ducts often exacerbates the problem by loosening old duct insulation loaded with contaminants.

Our Solution is Easy and Affordable

Four high efficiency electrostatic filters cover each discharge point on the inside portion of each set of louvers, cleaning the air as it enters the workspace.

- **Traps Airborne Contaminates** – Captures ductwork pollution as small as $3/10^{\text{th}}$ of a micron, including bacteria, volatile organic compounds (VOCs), dust, rust, dust mites, insect pieces, pollens and other allergens.
- **Reduces Illness and Allergies** – By eliminating many toxins and allergens from the air, air borne illnesses and allergic reactions are reduced, thereby reducing sick time, saving companies money.
- **Improves Productivity and Morale** – Improving indoor air quality makes people feel better on the job and increases their concentration, resulting in higher productivity and morale.
- **No Dirty Ceilings** – Prevents dust build up on ceiling.
- **Easy to Change Filters** – Filters last 4 to 6 months and the diffuser hinges open for quick filter replacement. Filter attaches with Velcro® hook fastener.

Testimonials

Using the Comfort First Filtered Diffuser™ saved me a lot of problems by the way they work. Being that air is also filtered is a BIG plus. These diffusers are great! – Glenn Terry, Senior Mechanic, NBC Studios

After trying other fixes, I bought my first Comfort First Filtered Diffuser™ and installation took only a few minutes. The nurses love it, no more draft complaints now! – Eddie Hall, HVAC/R Technician, Twentynine Palms Hospital

We had one of our employees wearing a glove on one hand when typing because of the breeze. After installing the Comfort First Filtered Diffuser™, problem solved. Ordered six more!!! – John Glose, Facilities Supervisor, Grand Island Central Schools

Satisfied Customers Are Everywhere

Universities – Berkeley, Purdue, Notre Dame, University of Iowa, Vanderbilt, Indiana State, Azusa Pacific

Chesterton, First American Title, Melissa's/World Variety Produce

The Comfort First Filtered Diffuser™

Ends Drafts. Cleans Air.

Solves the two biggest complaints in the office today:

- 1) Ends complaints of drafts from overhead diffusers.
- 2) Improves air quality in offices, reduces allergic reactions & illnesses caused by polluted duct work.

IAQ and Allergy Facts to Ponder

An estimated 50 to 60 million Americans (about one in every five adults and children) suffer from allergies, including allergic asthma. Allergies are the sixth leading cause of Chronic disease in the United States.

Inhaled allergens account for one third of these reactions (in the form of pollen, molds/fungi, dust mites, animal dander, insect parts and latex particles).

More than 33 million Americans suffer from chronic sinusitis.

Seasonal allergens cost more than \$4.5 billion in medical care annually.

Allergies are responsible for 3.5 million lost U.S. workdays each year, costing \$639 million.
